

## ABSTRACT OF THE DISCLOSURE

A plate body is disposed on a plurality of arrayed batteries. A first terminal is provided with a first portion which is connected to one of the batteries, and a second portion which is connected to an electronic element. A cover member is attached onto the plate body in a first direction, to provisionally fix the first terminal on the plate body. The first terminal is provided with a tolerance compensator, which connects the first portion and the second portion while compensating a positional difference between the first portion and the second portion in the first direction.
